

Schlesinger N, Norquist JM, Watson DJ. Serum urate during acute gout. *J Rheumatol* 2009;36:1287-9. In the Results section, page 1288, the third paragraph should read as follows. We regret the error.

“A $SU \leq 8$ mg/dl was observed in 32% (n = 109) [not n = 102] of patients overall, including 49% (n = 27) of patients taking allopurinol versus 29% (n = 82) of those not taking allopurinol ($p < 0.0001$) (Table 2). A $SU \leq 6$ mg/dl was observed in 14% (n = 48) [not 11% (n = 32)] of patients overall, including 29% (n = 16) of patients taking allopurinol versus 11% (n = 32) of those not taking allopurinol.”
