J Rheumatol 2022; doi: 10.3899/jrheum.210931

In the Methods section, under the subheading “Follow-up and study outcome,” the last sentence should be as follows: “All new DUs were recorded by contacting all 39 patients once every 1–3 months during follow-up.” The error does not affect the results or conclusions of the study.

This correction only applies to the April 1 First Release. The correct text appears in the print and online issues.
