

**Communication Vulnerabilities in Working-age Australians with
Musculoskeletal Conditions: A Cross-sectional Analysis**

Lowe DB, Taylor MJ, Hill SJ. Communication vulnerabilities in working-age Australians with musculoskeletal conditions: a cross-sectional analysis. J Rheumatol published online before print May 1, 2015, doi:10.3899/jrheum.140989. In the First Release version of this article, the Objective section of the Abstract should read as follows:

Objective. To estimate the prevalence of communication vulnerability (CV) and its association with various health measures among working-age Australians with musculoskeletal conditions (MSK). The various vulnerability characteristics may lead to inadequate communication between consumers and healthcare professionals.

We regret the error.
